REASN FOR ALLOWANCE

1. Rode discloses a cable reel, comprising a base plate, a reel body rotatably mounted with respect to said base plate, a braking reel mounted to said base plate in coupling relationship with the reel. Jacobsen et al disclose a constant traction device comprising caps that are friction bearings for rotationally mounting an axle of cable reel between mounting plates. Young et al disclose an adjustment mechanism for an aircraft chair which can be swivel horizontally comprising rotatable cam means that are oriented in a locking position such that the chair seat is locked against the base, a mounting plate receiving a hub for allowing rotation of a shaft. Rosenberg discloses a position reel positioned between upper and lower plates, tensioned spring brakes in friction engagement with the side of the reel. However, none of the references of record suggests either alone or in combination a cable reel wherein a braking coulisse is moveable in a radial direction with respect to said base plate, whereby elastic elements are provided for mounting at least one of said base plate and said reel body in a receiving body in the manner defined in the instant claims 1, 6, 10 and 14. Therefore, claims 2-5, 7-9, 11-13, depending therefrom, are considered to be allowable.
